# European Community Directive on the Conservation of Natural Habitats and of Wild Fauna and Flora (92/43/EEC)

# Fourth Report by the United Kingdom under Article 17

on the implementation of the Directive from January 2013 to December 2018

Conservation status assessment for the habitat:

H3130 - Oligotrophic to mesotrophic standing waters with vegetation of the *Littorelletea uniflorae* and/or of the *Isoëto-Nanojuncetea* 

**UNITED KINGDOM** 

#### **IMPORTANT NOTE - PLEASE READ**

- The information in this document represents the UK Report on the conservation status of this habitat, submitted to the European Commission as part of the 2019 UK Reporting under Article 17 of the EU Habitats Directive.
- It is based on supporting information provided by the geographically-relevant Statutory Nature Conservation Bodies, which is documented separately.
- The 2019 Article 17 UK Approach document provides details on how this supporting information contributed to the UK Report and the fields that were completed for each parameter.
- The reporting fields and options used are aligned to those set out in the European Commission guidance.
- Maps showing the distribution and range of the habitat are included (where available).
- Explanatory notes (where provided) are included at the end. These provide additional audit trail information to that included within the UK assessments. Further underpinning explanatory notes are available in the related country-level and/or UK offshorelevel reports.
- Some of the reporting fields have been left blank because either: (i) there was insufficient information to complete the field; and/or (ii) completion of the field was not obligatory.
- The UK-level reporting information for all habitats and species is also available in spreadsheet format.

Visit the JNCC website, https://jncc.gov.uk/article17, for further information on UK Article 17 reporting.

#### **NATIONAL LEVEL**

#### 1. General information

1.1 Member State	UK
1.2 Habitat code	3130 - Oligotrophic to mesotrophic standing waters with vegetation of the Lit

#### 2. Maps

2.1 Year or period	1983-2017
2.3 Distribution map	Yes
2.3 Distribution map Method used	Based mainly on extrapolation from a limited amount of data

2.4 Additional maps

No

#### **BIOGEOGRAPHICAL LEVEL**

#### 3. Biogeographical and marine regions

3.1 Biogeographical or marine region where the habitat occurs

3.2 Sources of information

#### Atlantic (ATL)

England

approach taken to set the FRA is explained in the 2007 and 2013 UK Article 17 habitat reports (see http://jncc.defra.gov.uk/page-

4064 and http://jncc.defra.gov.uk/page-6563).

5.14 Change and reason for change in surface area of range

Improved knowledge/more accurate data

The change is mainly due to: Improved knowledge/more accurate data

5.15 Additional information

#### 6. Structure and functions

6.1 Condition of habitat	a) Area in good condition (km²)	Minimum 97.36	Maximum	
	b) Area in not-good condition (km²)	Minimum 80.11	Maximum	
	c) Area where condition is not known (km²)	Minimum 31.15	Maximum	
6.2 Condition of habitat Method used	Based mainly on extrapolati	on from a limited amour	nt of data	
6.3 Short-term trend of habitat area in good condition Period	2007-2018			
6.4 Short-term trend of habitat area in good condition Direction	Uncertain (u)			
6.5 Short-term trend of habitat area	Insufficient or no data availa	able		
in good condition Method used	Has the list of typical species changed in comparison to the previous reporting period?		No	
6.6 Typical species			INO	
6.7 Typical species Method used				
6.8 Additional information	There is insufficient informa	ation to report on the ma	ximum area of ha	abitat in

There is insufficient information to report on the maximum area of habitat in unfavourable (not good) condition. Nevertheless, the information available indicates at least 40% of the total habitat area is in unfavourable condition.

#### 7. Main pressures and threats

#### 7.1 Characterisation of pressures/threats

Pressure

Pressure	Ranking
Extensive grazing or undergrazing by livestock (A10)	M
Forestry activities generating pollution to surface or ground waters (B23)	М
Hydropower (dams, weirs, run-off-the-river), including infrastructure (D02)	M
Sports, tourism and leisure activities (F07)	M
Other invasive alien species (other then species of Union concern) (I02)	Н
Mixed source pollution to surface and ground waters (limnic and terrestrial) (J01)	Н
Threat	Ranking
Extensive grazing or undergrazing by livestock (A10)	M
Forestry activities generating pollution to surface or ground waters (B23)	М
Hydropower (dams, weirs, run-off-the-river), including infrastructure (D02)	M
Sports, tourism and leisure activities (F07)	M

Ranking

Other invasive alien species (other then species of Union concern) (IO2)	Н
Mixed source pollution to surface and ground waters (limnic and terrestrial) (J01)	Н
Droughts and decreases in precipitation due to climate change (NO2)	M

7.2 Sources of information

7.3 Additional information

#### 8. Conservation measures

8.1 Status of measures	a) Are measures needed?	Yes
	b) Indicate the status of measures	Measures identified and taken
8.2 Main purpose of the measures taken	Maintain the current range, populat	ion and/or habitat for the species
8.3 Location of the measures taken	Both inside and outside Natura 2000	)
8.4 Response to the measures	Medium-term results (within the ne	xt two reporting periods, 2019-2030)
8.5 List of main conservation measures		

Reduce diffuse pollution to surface or ground waters from agricultural activities (CA11)

Reduce diffuse pollution to surface or ground waters from forestry activities (CB10)

Reduce impact of hydropower operation and infrastructure (CC04)

Reduce impact of outdoor sports, leisure and recreational activities (CF03)

Reducing the impact of (re-) stocking for fishing and hunting, of artificial feeding and predator control (CG03)

Management, control or eradication of other invasive alien species (CIO3)

Reduce impact of mixed source pollution (CJ01)

Restore habitats impacted by multi-purpose hydrological changes (CJ03)

Adopt climate change mitigation measures (CN01)

Implement climate change adaptation measures (CN02)

8.6 Additional information

#### 9. Future prospects

9.1 Future prospects of parameters	a) Range	Good	
	b) Area	Good	
	c) Structure and functions	Bad	
9.2 Additional information	Future trend of Range is Overall stable; Future trend of Area is Overall stable;		
	and Future trend of Structure and functions is Overall stable		

#### 10. Conclusions

10.1. Range	Favourable (FV)
10.2. Area	Favourable (FV)

10.3. Specific structure and functions (incl. typical species)

10.4. Future prospects

10.5 Overall assessment of **Conservation Status** 

10.8 Additional information

10.6 Overall trend in Conservation Status

10.7 Change and reasons for change in conservation status and conservation status trend

Unfavourable - Bad (U2) Unfavourable - Bad (U2)

Unfavourable - Bad (U2)

Stable (=)

a) Overall assessment of conservation status

Genuine change

The change is mainly due to: Genuine change

b) Overall trend in conservation status

No information on nature of change

The change is mainly due to:

Conclusion on Range reached because: (i) the short-term trend direction in Range surface area is stable; and (ii) the current Range surface area is approximately equal to the Favourable Reference Range.

Conclusion on Area covered by habitat reached because: (i) the short-term trend direction in Area is stable; and (ii) the current Area is approximately equal to the Favourable Reference Area.

Conclusion on Structure and functions reached because habitat condition data indicates that more than 25% of the habitat is in unfavourable (not good) condition.

Conclusion on Future prospects reached because: (i) the Future prospects for Range are good; (ii) the Future prospects for Area covered by habitat are good; and (iii) the Future prospects for Structure and functions are bad.

Overall assessment of Conservation Status is Unfavourable-bad because one or more of the conclusions is Unfavourable-bad.

Overall trend in Conservation Status is based on the combination of the shortterm trends for Range - stable, Area covered by habitat - stable, and Structure and functions - decreasing.

The Overall assessment of Conservation Status has changed between 2013 and 2019 because the conclusions for Structure and functions and Future prospects have changed from Unfavourable-inadequate to Unfavourable-bad.

The Overall trend in Conservation Status has changed between 2013 and 2019 because the Structure and functions trend has changed from increasing to uncertain [note that the reason for change is due to less information/accuracy or certainty in the information available].

#### 11. Natura 2000 (pSCIs, SCIs, SACs) coverage for Annex I habitat types

11.1 Surface area of the habitat type inside the pSCIs, SCIs and SACs network (in km<sup>2</sup> in biogeographical/ marine region)

11.2 Type of estimate

11.3 Surface area of the habitat type inside the network Method used

11.4 Short-term trend of habitat area in good condition within the network Direction

- a) Minimum
- b) Maximum
- c) Best single value 116.83

#### Minimum

Based mainly on extrapolation from a limited amount of data

Decreasing (-)

11.5 Short-term trend of habitat area in good condition within network Method used

11.6 Additional information

Based mainly on extrapolation from a limited amount of data

#### 12. Complementary information

12.1 Justification of % thresholds for trends

12.2 Other relevant information

## **Distribution Map**

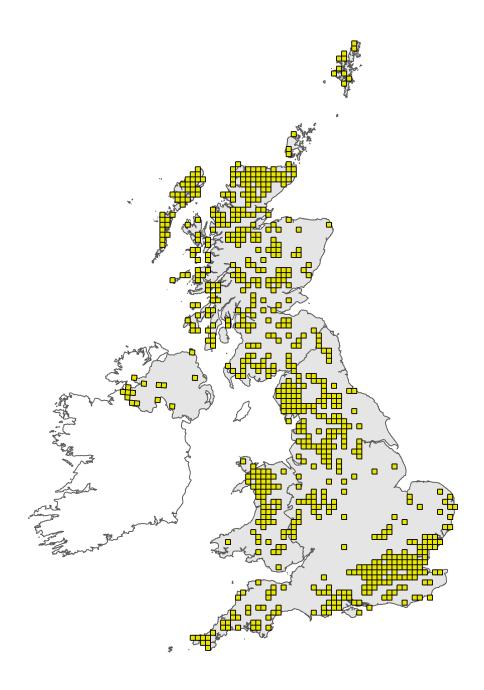

Figure 1: UK distribution map for H3130 - Oligotrophic to mesotrophic standing waters with vegetation of the *Littorelletea uniflorae* and/or of the *Isoëto-Nanojuncetea*. Coastline boundary derived from the Oil and Gas Authority's OGA and Lloyd's Register SNS Regional Geological Maps (Open Source). Open Government Licence v3 (OGL). Contains data © 2017 Oil and Gas Authority.

The 10km grid square distribution map is based on available habitat records which are considered to be representative of the distribution within the current reporting period. For further details see the 2019 Article17 UK Approach document.

## Range Map

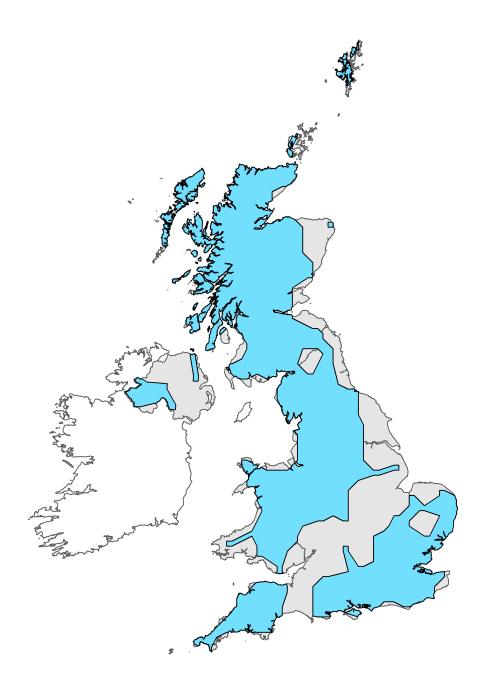

Figure 2: UK range map for H3130 - Oligotrophic to mesotrophic standing waters with vegetation of the *Littorelletea uniflorae* and/or of the *Isoëto-Nanojuncetea*. Coastline boundary derived from the Oil and Gas Authority's OGA and Lloyd's Register SNS Regional Geological Maps (Open Source). Open Government Licence v3 (OGL). Contains data © 2017 Oil and Gas Authority.

The range map has been produced by applying a bespoke range mapping tool for Article 17 reporting (produced by JNCC) to the 10km grid square distribution map presented in Figure 1. The alpha value for this habitat was 25km. For further details see the 2019 Article 17 UK Approach document.
